

A Ecological drivers

● Plants (P) ◆ Pollinators (I)

1) Traits

Floral resources
Morphometrics

Trait-matching

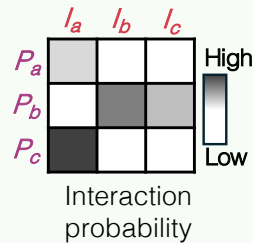

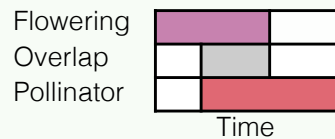

2) Abundance

Low

High

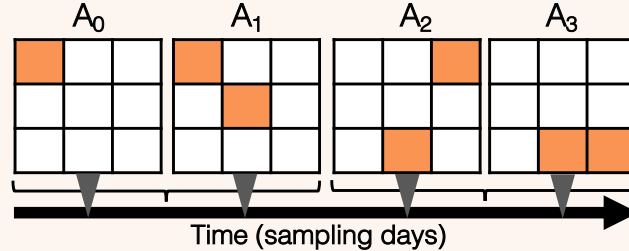

3) Phenology

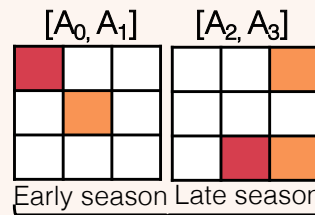

B Temporal scale

Interactions
□ None ■ Single ■ Multiple

1) $\Delta 1$ day

2) $\Delta 2$ Aggregated weeks

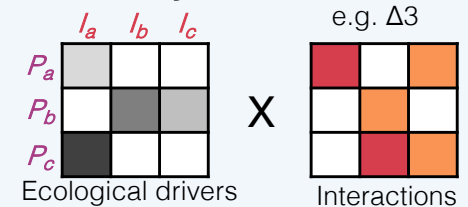

3) $\Delta 3$ Full season

C Analytical framework

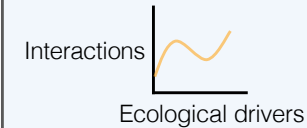

- Across drivers (A) and temporal scales (B)

1) Matrix analyses

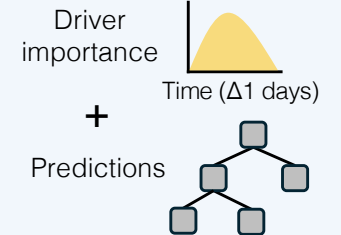

2) Generalized Additive Models

Time varying effects
($\Delta 1$ days)

3) Random forest

4) Null models

Pollinator preferences
